FLORIAN BELLOTTI
INFORMATION TECHNOLOGY CONSULTANT

Passionate about the practices of the software craftsmanship movement, I deeply wish to have a positive impact on our society. This can result in the development of useful and beneficial products, consulting and training.

Particularly committed to software quality and time-to-market reduction, I apply Agile and DevOps principles,

I am full-stack. That is to say that I had the opportunity to lead technical missions (development & operation), to do product scoping and audits, to advise and apply good methodological practices or also to conduct workshops UX in English in business areas that are initially unknown to me.

My goal today is to find a job that allows me to continue to learn, help and grow one or more teams and develop a useful and beneficial product.

EXPERIENCES

OCTO Technology
Jan. 2018 – Aujourd'hui
Lausanne

Consultant
Thanks to OCTO, I have the opportunity to cover a wide range of missions. These missions can be consulting, product development and training.

Examples of missions:
- Development of an ambitious product to help teams of a biotech in San Francisco to organize and track the experiments of several laboratories. This mission requires to be multidisciplinary. For example, I participated in the product scoping, conducted UX workshops, set up a Kubernetes infrastructure on Google Cloud Patform and developed the frontend application (Angular) and as much as the backend application (Spring & Kotlin).
- Set up a 3-day spring boot / spring cloud training course for several clients including a large insurance group.
- Audit of an implementation of a BPM solution for a private bank.
- IAM Strategy.

Software craftsmanship, DevOps, Agile, Spring, conseil, formation
